

Forkcast — Mobile Development Handoff Package

Prepared July 19, 2026 · Contact: support@prosperiumars.com Live product reference: <https://seymurhh.github.io/forkcast-live/>

This folder is the complete handoff for building the Forkcast mobile app (Android first via Google Play, then iOS/App Store) with **React Native** / **Expo**. The shipped web app — not any earlier mockup — is the source of truth; repo access accompanies this folder.

Read in this order

#	File	What it is	For
1	1_MOBILE_HANDOFF	The build spec: shared-code plan (which TypeScript modules port unchanged), 21-screen inventory, design tokens, business-logic spec, backend contract, milestones M0–M3	Developer
2	2_BACKEND_SETUP	Supabase backend: what syncs, sync model, project setup steps	Developer + founders
3	3_supabase_migration_0001_data_schema	0001_data_schema: schema with row-level security — apply as-is, do not redesign	Developer
4	4_APP_INFO_SPEC	The Settings screen spec: required rows (incl. Delete Account, Restore Purchases), hosted policy URLs, product non-negotiables	Developer
5	5_STORE_READINESS	Everything the stores require beyond the build: privacy/data-safety forms, health-app declarations, IAP, testing gates, founders' to-dos	Both

Each document is included as PDF (for reading) and Markdown (for copying).

The three rules that override everything else

1. **Nutrition math is imported, never re-implemented.** `lib/nutrition.ts` from the repo is the product. Same inputs must give identical numbers on web and mobile.
2. **Every number carries its provenance** (partner-verified / published / estimated $\pm$), every AI output shows confidence and is correctable, every simulated state is labeled. These honesty constraints are the brand.
3. **Health data is never used for advertising**, and account deletion must work in-app. Both are store requirements and product policy.

Hosted policy pages (required by both stores, already built)

- Privacy Policy — <https://seymurhh.github.io/forkcast-live/privacy/>
- Terms and Conditions — <https://seymurhh.github.io/forkcast-live/terms/>
- Source of Data & AI — <https://seymurhh.github.io/forkcast-live/data-and-ai/>

(Drafts pending legal review; live after the next site deploy.)

Questions

Anything ambiguous: email support@prosperiumars.com rather than guessing — especially anything touching nutrition numbers, provenance labels, or health-data handling.
